

**2021  
Alaska Fire Weather Program  
Annual Operating Plan  
for  
National Weather Service, Alaska Region (NWS)  
Alaska Wildland Fire Coordinating Group (AWFCG)**

A. **Purpose.**

To describe the roles, responsibilities and operational procedures of the NWS, Alaska Fire Service (AFS), US Forest Service (USFS), State of Alaska Division of Forestry (DOF) and the AWFCG membership in support of the 2021 Alaska Fire Weather Program, to ensure effective use of NWS fire weather products, and establish responsibilities of the Alaska Interagency Coordination Center (AICC) fire weather meteorologist.

Authorities. This Plan is maintained and coordinated by the Fire Weather Committee of the Alaska Wildland Fire Coordinating Group (Appendix A).

B. **Operational Guidelines**

**The Principal operating period for the Alaska Fire Weather Program runs from** April 1 through September 1, however, the exact operating periods are subject to the fire weather threat. The roles described in the Operating Plan are intended to be flexible and allow for changing conditions of personnel, workload and weather hazards.

WFOs may request a delay or early end of routine fire weather forecasts if excessive snowpack, rain and/or continued winter weather is expected for the scheduled start date(s), or excessive cool and moist weather is imminent prior to the regular end of the fire weather forecast season. WFOs will contact the AICC meteorologist who will, in turn, canvas the appropriate Protection Agency Fire Management Officers (FMOs) to coordinate any changes to their regular season schedule.

Conversely, the Protection Agency FMOs may request an early issuance or extension of routine fire weather forecast if the seasonal threat for fire danger is likely to fall outside scheduled date(s). Protection Agency FMOs should coordinate any date changes requests with the AICC Meteorologist. The AICC Meteorologist will then coordinate the change in service with the WFO Management Teams. WFOs will notify the NWS Regional Fire Weather Program Manager of any changes.

Coordination of schedule changes may result in a transition of services such as additional information in the Area Forecast Discussion product in lieu of the daily fire weather forecast products. Such coordination should begin no later than five (5) days in advance of the regular season start or end dates listed in Appendix C.

Unless wildfire conditions exist or are anticipated, fire weather products will not be provided for Anchorage forecast zones 131, 135, 171, 181, 185, 187, 191, 195, and Fairbanks forecast zones 201-207, 211 and 213 (see Appendix E for zone listings and map).

C. **NWS Responsibilities**

1. The NWS will provide a Regional Fire Weather Program Manager through Alaska Region Headquarters, and fire weather focal points at the Anchorage, Fairbanks, and Juneau Weather Forecast Offices (WFO). The fire weather focal points and Lead Forecasters will be responsible for timely delivery and quality of fire weather products and services from their WFOs.

2. Consistent with the Interagency Agreement for Meteorological Services, the NWS also will provide the following:

a. **Red Flag Warnings and Fire Weather Watches.**

The notification and issuance of Red Flag Warnings and Fire Weather Watches will be the number one priority of the fire weather program. Red Flag Warnings and Fire Weather Watches will be issued in accordance to National Weather Service Instruction 10-401, Fire Weather Products Specification, with Red Flag Event criteria defined below.

A Fire Weather Watch should be issued 24 to 96 hours in advance of the expected onset of criteria. The intent of a Fire Weather Watch is to alert users to the potential for Red Flag Event conditions a day (or more) in advance.

A Red Flag Warning warns of an impending, or occurring, Red Flag Event. Its issuance denotes a high degree of confidence that weather and fuel conditions consistent with Red Flag Event criteria will occur in 48 hours or less.

**Red Flag Warning/Fire Weather Watch Criteria:**

There are two types of Red Flag Warning Criteria; convective and non-convective. Non-convective criteria must be met in all categories (temperature, RH, and wind) for at least three observations either at one station or a combination such as one hour at three stations or two hours at one station plus one hour at another. As always, fuel conditions must be coordinated with AICC Predictive Services

**General non-convective Red Flag Warning criteria:**

Temp $\geq 75^{\circ}\text{F}$	RH $\leq 25\%$	Wind $\geq 15$ mph (sustained)
--------------------------------	----------------	--------------------------------

**Exceptions to the non-convective Red Flag Warning criteria:**

223 – Deltana and Tanana Flats 226 – Eastern Alaska Range	No temperature criteria	RH ≤ 25%	Wind ≥ 30 mph (sustained)
<b>Pre-green-up*</b> in zones: 101- Anchorage 111- Matanuska Valley 121- Western Kenai 125- Western PWS	Temp ≥ 65°F	RH ≤ 25%	Wind ≥ 15 mph (sustained)

\*Green-up will be discussed with local fire managers each spring to ensure an appropriate change date for South Central zones.

**Lightning Criteria**

Forecast LAL ≥ 4	Very dry fuels using adjective ratings with guidance from Predictive Services.
------------------	--

Headlines:

Headlines for Red Flag Warnings or Fire Weather Watches will appear in the RFW product as well as the FWF for the appropriate zone(s). The headline will contain the phrase “FOR LIGHTNING” if convective criteria are forecast to be met. Headlines will also specify distinct areas of the fire weather zone if the entirety of the geographic area is not expected to be impacted. A headline summarizing active Red Flag Warnings or Fire Weather Watches with zone numbers will appear at the top of the FWF product.

Coordination with AICC Predictive Services:

WFOs will make every effort to consult the AICC Predictive Services (356-5691) when Red Flag Warnings or Fire Weather Watches are considered. The AICC or its designated Regional Area Contact is responsible for determining if fuel conditions are consistent with issuing the Warning/Watch. This determination is made based on recent precipitation and drying events, the type and amount of fuel available, and a review of available current and forecast fire indices, among other factors. Fuel conditions are critical to the Warning/Watch issuance decision. **If fuel condition consultation with the AICC is not possible, forecasters will use the fuels conditions posted by AICC Predictive services as the basis for issuing a Warning or Watch when Red Flag Event conditions are anticipated.** AICC posts fuel conditions on a non-public webpage, the link to which should be included in WFO documentation as appropriate (example, Station Duty Manual). The decision making process behind whether to issue a FWW/RFW is a collaborative process between AICC Predictive

services and NWS forecast offices. This decision process requires coordination and agreement.

AICC Predictive Services will be telephoned at 356-5691 upon initial issuance of or changes (including cancellation) to the Warning/Watch. If AICC Predictive Services cannot be reached, WFOs will call Initial Attack (IA) at 356-5670. If neither cannot be reached, leave a message on the AICC Predictive Services line (356-5691) with the pertinent warning/watch information. The phone number for Initial Attack is not publicly published, but should be included in WFO documentation as appropriate (example, Station Duty Manual).

b. Spot forecasts.

WFO spot forecast issuance should take priority over routine fire weather forecasts.

Incidents will submit requests for spot forecasts via the NWS Spot website for wildland fires or for managed ignited fires planned within 24 hours. Spot forecast requests must include accurate and updated latitude and longitude coordinates for the site of concern during the period covered by the spot forecast. Spot requests will also include observations relevant to the area of concern. For ongoing fires or prescribed burns requiring multiple spot forecasts, Incidents will submit individual requests containing current/updated information and observations. Once a Spot forecast is requested, the Incident will phone the WFO to verify receipt of the request. WFO forecasters should not submit requests on behalf of the Incident requesting the spot forecast. Completed forecasts will be posted to the NWS Spot Forecast Monitor webpage (<https://www.weather.gov/spot/monitor/?lat=64.42605719924293&lon=-163.49631747619742&z=4>). Other dissemination means may be provided, but only when a back-up method is necessary. The WFO forecaster will call the requesting agency's contact to verify receipt of the forecast. Incidents are encouraged to notify NWS forecasters in advance of prescribed spot requests and/or conduct preliminary coordination as needed to meet regulatory mandates. Such notification/coordination may be accomplished by contacting the appropriate NWS forecast office by phone. This does not preclude the use of the NWS Spot website within 24 hours of the planned ignition.

c. Routine daily fire weather forecasts, outlooks and discussions.

Production of routine fire weather forecasts should follow the schedule in Appendix C.

1. The Fire Weather Forecast (FWF).

This product will include information (as described below) for the first three 12-hour periods for morning forecasts and first four periods for afternoon forecasts. The forecast also will include information for days 3 through 5. [Note: the Fire Weather Program Time Line for Products and Services is listed in Appendix C, the Daily Schedule for Products and Services is listed in Appendix D, and an example of the Fire Weather Forecast is included as Appendix H]. Details about product format are provided below:

- Morning and afternoon Fire Weather Forecasts will include information on sky condition and weather, relative humidity, wind speed and direction, chance of wetting

rain (defined as  $\geq 0.10$ " of liquid precipitation in 12-hours), and potential for wet and/or dry thunderstorms.

- Red Flag Warnings and Fire Weather Watches will be headlined at the top of the corresponding fire weather zone forecast. The headline will specify the time period, area and conditions covered by the watch/warning.

2. Gridded Weather Forecast Elements via the National Digital Forecast Database (NDFD).

National Digital Forecast Database (NDFD) grids are used to produce a wide variety of products and services for fire weather support, including ingestion into Fire Weather Indices (FWI) calculations. Information regarding NDFD grids, including the operational status of NWS grid elements, is available through links from the following website: [https://www.weather.gov/mdl/ndfd\\_info](https://www.weather.gov/mdl/ndfd_info)

Contacts for customer support regarding NDFD data availability or data accessing can be found at the following website: [https://www.weather.gov/mdl/ndfd\\_customer](https://www.weather.gov/mdl/ndfd_customer). The NWS Alaska Region Fire Weather Manager should be copied on trouble-ticket correspondence.

d. Web Services.

The NWS will maintain, and update daily, the Alaska Fire Weather page at <https://www.weather.gov/arh/fire>. The Fire Weather page will include daily fire weather forecasts, graphic display of Red Flag Warnings and Fire Weather Watches, the public version of this Annual Operating Plan, and the Spot forecast interface access. Any changes to the content or display of the website information should be coordinated with the NWS Alaska Region Fire Weather Program Manager and AICC.

e. Weather observations.

Daily/hourly observations for ASOS/AWOS stations will be available from a file transfer protocol (FTP) location determined by local procedures. A listing of stations and agency ownership can be found at the following web address: [https://www.weather.gov/arh/ak\\_obs](https://www.weather.gov/arh/ak_obs)

f. Smoke management forecasts and information.

The transport wind and the mixing height, required information for smoke management, will be included in spot forecasts upon request.

g. Consultation and technical advice.

The WFO should provide requested information and advice as urgency of situation and operational time constraints dictate.

h. Drought and Snowpack Consultation

The NWS Alaska Pacific River Forecast Center will provide information and guidance on drought and snowpack conditions in the late winter through spring.

- i. Amendments/updates.  
Forecasts, Red Flag Warnings, and Fire Weather Watches will be updated according to the criteria listed in Appendix F. The spot forecast is a one-time site-specific product which is not routinely updated. Spot forecasts will be re-issued when representative observations or other weather information are available to the forecaster, and he/she is confident that an update could affect fire suppression or prescribed burning operations and/or the safety of personnel. Upon reissuance of a Spot forecast, the WFO will call the originator of the Spot request to inform them of the changes. Incident/Jurisdictional Agency personnel may contact the appropriate WFO for a spot update if forecast conditions appear unrepresentative of the actual weather conditions.
- j. Fire weather training.  
Upon the request of the AICC, NWS staff should assist in teaching sessions containing fire weather modules as staffing and office outreach funding (when applicable) allows.
- k. Special meteorological services.  
Any additional meteorological services not explicitly described in this Plan may be requested by the AICC through the Regional Fire Weather Program Manager. During emergency situations outside of administrative duty hours (7:30am to 4:00pm Monday through Friday), requests should be directed to the WFO Management team (see Appendix B).

D. **Alaska Interagency Coordination Center Meteorologist (AICC)**

The AICC Fire Weather Meteorologists are based at the AICC in Fairbanks. Their duties are to add value to the products and services furnished by the NWS. The AICC Meteorologists will be available to all federal and state agencies to consult regarding fire weather and fire potential and other long-range weather issues.

Their duties will include, but are not limited to:

1. Monthly Fire Potential Outlook.
  - a. AICC will prepare fire potential outlooks and post them to the AICC website at the beginning of each month.
2. Daily 7-day Outlook
  - a. AICC will prepare a 7-day outlook including fire weather, fire potential, and resource allocation. This product will be issued Monday through Friday; weekend forecasts are issued based on severity of weather and/or fire activity.
3. Air Quality: The AICC meteorologist will coordinate with the Alaska Department of Environmental Conservation (ADEC) Air Quality Meteorologist regarding air quality hazards and information.

4. Research.  
The AICC meteorologist will pursue and or participate in research on Fire Weather, Fuels Research, and Fire Potential in Alaska.
5. Statewide Briefings.
  - a. Statewide Briefings will be conducted by the AICC Meteorologist. These briefings will begin when fire management officers deem appropriate and will be held daily as needed. Interested agencies may join a webinar online. The briefing will discuss statewide conditions and refer to graphic products displayed on the AICC maintained website. Weekend briefings will be provided through the main fire season. Briefing content is listed in Appendix G.
  - b. Additional briefings will be conducted when significant weather changes warrant, or during severe fire conditions, as requested by user agencies.
  - c. The AICC Meteorologist will coordinate conference calls between the AICC and NWS WFO's when significant weather or fire conditions exist.
6. Pre-Season and Post-Seasonal Assessments.
  - a. Pre-season assessment will be prepared in the spring, and will be posted as a standard monthly Fire Potential Outlook product as identified in D.1.
  - b. Post-season assessment will be prepared for the Interagency Fall Fire Review Meeting.
  - c. Pre and post-season reviews will include historical climate and weather analysis.
7. Risk Assessments for fire behavior and fire danger potential.
  - a. AICC Meteorologist will gather current fuels condition information from local areas and suppression FMOs, and coordinate with NWS on Red Flag Warnings and Fire Weather Watches.
  - b. Fuel conditions for each forecast zone will be provided on the AICC website and updated, with a time/date stamp. Updates will be provided daily or as conditions warrant.
  - c. Fuel and Fire Behavior Advisories will be issued by Predictive Services when a significant area is indicating very dry fuels and has potential for exceptional or extreme fire behavior. These advisories will be updated every 14 days or as conditions change. There is a standard national format and protocol that will be followed, and the advisories will be posted on the AICC homepage and the National Map. Additionally, the meteorologist on duty will contact the appropriate National Weather Service Office(s).
  - d. Drought information will be routinely assessed by the AICC meteorologist.
8. Liaison between federal and state agencies and the NWS.
9. Team member for collaborative planning efforts.
  - a. Develop Alaska Fire Danger Operating Plan.
10. Focal Point for RAWS coordination.

11. WIMS.

The AICC Predictive Services will ensure pertinent observations from their stations of interest are archived into WIMS in a timely fashion.

12. CFFDRS Indices.

AICC Predictive Services will ensure continual functioning of the Alaska Fire and Fuels (AKFF) Website (<https://akff.mesowest.org/>) throughout the fire season to ensure ability of all users to access fire weather data and fire weather indices (FWI). AKFF is the result of a contract between the Alaska Fire Service and the University of Utah MesoWest and Synoptic Labs (MW/SL) with the goal to use data assets of MW/SL to increase the available information regarding wildland fire environments in the state of Alaska.

In AKFF, Surface Weather Observations are obtained from a variety of station networks through MesoWest. *RAWS stations* are maintained by fire and resource management agencies. *NWS stations* are found primarily at airports, and are maintained by the Federal Aviation Administration (FAA). *US Array* provides a new network of seismic and weather stations, maintained by the Incorporated Research Institutions for Seismology ([iris.edu](http://iris.edu)). Data associated with weather observing locations is stored with a latitude and longitude which allows it to be located in time and space. Weather observations for these point locations are captured by sensors at each location. Weather forecasts are obtained from the *National Weather Service (NWS) National Digital Forecast Database (NDFD)* for that particular location. Gridded, or modeled, weather data is related to and calibrated from data associated with weather observing locations mentioned above, but is not directly derived from that data here. Observational (analysis) grids are obtained from the *Real-Time Mesoscale Analysis (RTMA)* and *NWS River Forecast Center (RFC) Quantitative Precipitation Estimate (QPE)*, while the gridded weather forecasts are obtained from the same NWS NDFD forecast mentioned above. FWI codes and indices are produced for both surface location and gridded data types, though their calculations are completely independent of each other.

**E. Alaska Fire Service (AFS), U.S. Forest Service (USFS), Division of Forestry (DOF), and the Alaska Wildland Fire Coordinating Group (AWFCG).**

1. In concurrence with the National Agreement, the agencies will provide:
  - a. Fire weather observations. Observations from all RAWS are uplinked by satellite and posted on the Alaska Fire and Fuels (AKFF) ([https://akff.mesowest.org](https://akff.mesowest.org/)) website, as well as MesoWest (<https://mesowest.utah.edu/>)
  - b. Provide pertinent weather information, and observations, in support of spot forecast requests.
  - c. On-site meteorological support. On an as-needed basis (typically, but not limited to support of Type I or Type II Incident Management Teams), a request for an Incident Meteorologist (IMET) for on-site support will be initiated by the Incident using an overhead resource order and follow established dispatch procedures. For IMETs based in the Alaska Region, the sending office will provide travel arrangements upon request, driving directions, incident contact numbers and other relevant reporting instructions for IMETs and IMET trainees. Logistical support for all NWS personnel assigned to wildland fires will be supplied by the Incident to which he/she is assigned. On an as needed basis, an AICC resource order can be

filed to request an IMET to augment the staffing at Alaska WFOs, the AICC, or for on-site fire assignments. WFO staff supplementation must be coordinated and in agreement with the local office management team.

- d. Air Resources Advisors. On an as needed basis, AICC will order Air Resource Advisors (ARAs) to assist with smoke monitoring and air quality forecasting when air quality becomes a health hazard for a significant portion of the state or a large population. In addition, local air quality assistance may be hired to assist with smoke monitoring and sensor deployment.
- e. NFMD (National Fuel Moisture Database) is the warehouse for fuel moisture sampling data. It is encouraged that all agencies post fuel moisture data at this website. The AICC meteorologist can provide contact information regarding the Geographic Area Administrator, so new users can setup an account. The national NFMD website is located at <http://www.wfas.net/nfmd/public/>.
- f. Training. NWS is welcome to nominate personnel to attend fire training sessions offered in Alaska. Acceptance is based on completion of prerequisite training requirements and space availability. Upon request, the NWS Alaska Region will be guaranteed training for S390 each year offered, as this is a required course for IMET Certification.
- g. Other special services. A multi-port teleconference line will be available for briefings and conferences, though use of web-based meeting platforms is also encouraged for visual aid
- h. The AICC (<http://fire.ak.blm.gov>) and DOF (<http://www.dnr.state.ak.us/forestry>) also will maintain websites with links to NWS fire weather information.
- i. AKFF will be the data source for fire weather observations and fire weather indices, as well as fire behavior calculations.
- j. The AFS will provide real-time lightning data to the NWS.
- k. Spot forecast requests will include a voice contact phone number of the requesting agency. Spot forecast requests sent through the web spot program will be followed up by a phone call to the appropriate NWS forecast office to verify receipt.

## F. Administration

### 1. Operating Period.

The principal operating period for the Alaska Fire Weather Program will be from April 1, through September 1. During other times, the National Weather Service will provide Fire Weather Forecast and Warning product(s), as requested by the agencies, based on the severity of fire conditions. Agencies may request earlier or later dates for weather forecasting as outlined in Section C.2.a. above.

### 2. Annual Meetings.

During the fall of each year, the chair of the Fire Weather Committee will coordinate a joint meeting of the Fire Weather Committee for the purpose of reviewing the previous season's weather operations and preparing for the next fire weather season. If requested by one of the agencies, additional meetings may be arranged.

### 3. Annual Operating Plan.

This document fulfills the National Agreement for Meteorological Services in Support of Agencies with Land Management and Fire Protection Responsibilities, which establishes requirements for an Annual Operating Plan.

4. Modification of Fire Weather Operating Procedures.

Terms of this Operating Plan may be modified at any time. Agencies participating in this Operating Plan will provide reasonable advance notification of any operationally significant changes to other Alaska state fire weather stakeholder agencies, as listed in Section F.2 above.

5. Effective Date.

This Operating Plan is effective beginning April 1 and will be reviewed annually.

## Appendix C

<b>Tentative Product and Service Timeline</b> <i>Dates may be appropriately altered based on weather and fire danger</i>	
<b>April 1 – April 9</b>	<b>All NWS WFOs:</b> Spin-up operations and training for daily forecast issuance. During this period, forecasts, watches and warnings will be issued if weather and fuel conditions warrant, as requested by Protection and Jurisdictional Agencies.
	<b>NWS ARH:</b> Ensures NWS Alaska Region Fire Weather webpage is operating and providing current products.
<b>April 12</b>	<b>WFO Anchorage:</b> Begin production of daily written forecasts (morning and afternoon) for zones: 101, 111, 121, and 125.
	<b>AICC:</b> Begin 7-day forecast product as needed and start CFFDRS calculations in AKFF site three days after snow-free.
<b>April 19</b>	<b>WFO Anchorage:</b> Begin production of daily written forecasts (morning and afternoon) for zones: 141, 145, 152, 155, and 161.
	<b>WFO Fairbanks:</b> Begin production of daily written forecasts (morning and afternoon) for zones 221-227.
<b>April 26</b>	<b>WFO Fairbanks:</b> Begin production of daily written forecasts (morning and afternoon) for zones: 212, 214-216, 219 and 220.
	<b>WFO Juneau:</b> Begin production of daily written forecasts (morning).
	<b>AICC:</b> Begin Monday through Friday stand-up/teleconference briefing at the AICC. Weekend briefings will begin when needed.
<b>August 6</b>	<b>WFO Juneau:</b> End production daily written forecasts.
	<b>WFO Anchorage:</b> End production of daily written forecasts for zones: 125, 155, and 161.
<b>August 13</b>	<b>WFO Anchorage:</b> End of production of daily written forecasts for zones: 101, 111, 121, 141, 145, and 152.
<b>September 1</b>	<b>WFO Fairbanks:</b> End of production of daily written forecasts.  <b>END OF PRINCIPAL OPERATING PERIOD</b>
<b>Beyond September 1</b>	Services of NWS and AICC meteorologists provided upon request. During this period, forecasts, watches, and warnings will be issued if weather and fuel conditions warrant, as requested by Protection and Jurisdictional Agencies.

## Appendix D

<b>Product and Service Daily Schedule</b>	
<b>Local Time</b>	<b>Item</b>
0800	<i><b>Juneau WFO:</b></i> Morning Fire Weather Forecasts disseminated and published to the internet.
	<i><b>Anchorage WFO:</b></i> Fire Weather Forecasts disseminated and published to the Internet.
	<i><b>Fairbanks WFO:</b></i> Fire Weather Forecasts for zones 218-226 disseminated and published to the internet.
0830	<i><b>Fairbanks WFO:</b></i> Morning Fire Weather Forecasts for zones 208-210, 212, 214-217, and 227 disseminated and published to the internet.
0945	Statewide AICC Meteorologist Briefing.
1100	7-day Outlook published and Fuels Status document updated on AICC website.
1200	Podcast of AICC Meteorologist Briefing will be posted to the AICC website.
1500	Fuel conditions and actual Fire Weather Indices are posted on the AKFF website. Indices are automatically calculated and posted when the 1400 hr observation for each station is reported.
1400-1500	State manual weather stations transmit their weather observations to enter into AKFF.
1500-1600	Afternoon Fire Weather Forecast form Anchorage and Fairbanks disseminated and published to the Internet.
Anytime	Spot Forecasts as needed. Contact as early as possible.
	Forecasted Fire Weather Indices available on the AFS website.

## Appendix F

### Amendment Criteria for Red Flag Warnings Fire Weather Watches Fire Weather Forecasts

Update when:

- A. Forecasted wind direction differs from observed wind direction by 90 degrees or greater when the observed sustained wind speed is greater than 10 mph.
- B. Observed sustained wind speed differs from forecasted wind speed by 10 mph or more.
- C. The observed relative humidity ( $RH_{\text{observed}}$ ) is less than 50% and the forecast relative humidity ( $RH_{\text{forecast}}$ ) minus the observed relative humidity is greater than 10%,

$$RH_{\text{observed}} < 50\% \text{ and } RH_{\text{forecast}} - RH_{\text{observed}} > 10\%$$

$$\text{where: } RH_{\text{forecast}} - RH_{\text{observed}} = RH \text{ forecast error}$$

- D. No thunderstorms are forecast but thunderstorms develop.
- E. The timing of the Red Flag Warning or Fire Weather Watch valid time changes.
- F. The areal extent or “location” of the Red Flag Warning or Fire Weather Watch changes.
- G. A Red Flag Warning or Fire Weather Watch is issued or cancelled.

## Appendix G

### Briefing Content

Briefings shall provide general statewide fire weather information for all cooperating agencies. Discussion items will include:

Previous Day's:

- Maximum Temperature/Minimum Relative Humidity
- Precipitation
- Significant weather events

Today's, tomorrow's, and next day's:

- Red Flag Warnings/Fire Weather Watches
- Maximum Temperature/Minimum Relative Humidity
- Precipitation
- Areas of stronger winds and convection
- Significant weather events
- FFMC – Fine Fuel Moisture Codes

A longer range (7 day) forecast with an emphasis on wet or dry thunderstorm potential and discussion on temperature, humidity, winds and precipitation.

Relevant Fire Weather Indices for Today

The graphics display will consist of the following charts: (Charts used in the briefings may be flexible and up to the discretion of the AICC meteorologist.)

- Previous 24 hour maximum temperature
- Previous 24 hour minimum relative humidity
- Previous 24 hour precipitation
- Previous 24 hour lightning
- 500 mb

Most recent satellite imagery

Map of any Red Flag Warnings or Fire Weather Watches

500 mb forecast charts for days 1-7.

Gridded forecast maps of 2 pm temperature and RH, afternoon winds, 24-hour precipitation, and convection potential for days 1-3.

Today's forecast Fire Weather Indices

## Appendix H

### NWS Fire Weather Product Examples

The following are examples of fire weather products produced by the NWS Alaska Region. Remember that there may be slight variations in products due to each WFO's own procedures and policies. For national fire weather product specifications please see the fire weather section of the NWS Directives, located at <http://www.nws.noaa.gov/directives> under the Fire Weather section (10-4 series).

#### 1. Routine Daily Fire Weather Forecast for One Fire Weather Zone Including Discussion

FNAK52 PAFG 021256  
FWFWCZ

Fire Weather Planning Forecast for Western Alaska  
National Weather Service Fairbanks AK  
456 AM AKDT Mon Jul 2 2018

.DISCUSSION...High pressure building across the Interior will bring warmer and drier conditions through midweek. Minimum RH values will fall into the upper 30s to lower 40s today across the western Interior and into the lower to mid 30s Tuesday and Wednesday but are expected to remain above Red Flag criteria. Temperatures will climb from the upper 60s to lower 70s today into the lower to mid 70s on Tuesday and into the middle 70s on Wednesday. Pressure gradient tightens today and Tuesday with increasing west to southwesterly winds. Winds are expected to remain below Red Flag criteria into Wednesday.

## 2. Red Flag Warning

WWAK61 PAFC 232301  
RFAER

URGENT - FIRE WEATHER MESSAGE  
National Weather Service Anchorage AK  
301 PM AKDT Mon Jul 23 2018

AKZ141-241600-  
/O.EXT.PAFC.FW.W.0001.000000T0000Z-180725T0400Z/  
301 PM AKDT Mon Jul 23 2018

...RED FLAG WARNING NOW IN EFFECT UNTIL 8 PM AKDT TUESDAY FOR HOT  
DRY AND WINDY CONDITIONS FOR THE COPPER RIVER BASIN...

- \* Winds...South to southeast 15 mph with gusts to 25 mph.
- \* Relative Humidity...As low as 18 percent.
- \* Temperatures...In the upper 70s to mid 80s.
- \* Timing...Red flag conditions will abate by 8 PM this evening  
then develop again Tuesday during the late afternoon through  
early evening hours. Humidities will then gradually recover as  
temperatures cool and winds die down through the evening and  
overnight hours.
- \* Impacts...Rapid ignition, growth and spread of fires will be  
possible.

### PRECAUTIONARY/PREPAREDNESS ACTIONS...

A red flag warning means that critical fire weather conditions  
are imminent or occurring now, or will shortly. It is directed  
toward fire agencies, and through them to the public.

### 3. Fire Weather Watch

WWAK63 PAFG 101304  
RFWAFG

URGENT - FIRE WEATHER MESSAGE  
National Weather Service Fairbanks AK  
504 AM AKDT Thu May 10 2018

AKZ223-110200-  
/O.CON.PAFG.FW.A.0001.180510T2000Z-180512T0200Z/  
Deltana and Tanana Flats-  
504 AM AKDT Thu May 10 2018

...FIRE WEATHER WATCH REMAINS IN EFFECT FROM NOON AKDT TODAY  
THROUGH FRIDAY AFTERNOON FOR DELTANA AND TANANA FLATS...

\* AFFECTED AREA...Near Alaska Range passes and Delta Junction.

\* TIMING...Winds continue to increase today and will diminish  
overnight. Winds will increase again Friday diminishing late in  
the evening. The strongest winds will be Friday during the day.

\* WINDS...Southeast 25 to 35 mph with gusts up to 50 mph.

\* HUMIDITY...As low as 19 percent.

\* TEMPERATURES...55 to 71.

\* IMPACTS...Rapid ignition, growth and spread of fires will be  
possible.

PRECAUTIONARY/PREPAREDNESS ACTIONS...

A Fire Weather Watch means that weather conditions could lead to  
the potential for a Red Flag event in the near future. This watch  
will remain in effect until it is upgraded to a Red Flag Warning  
or that it is determined that the Red Flag event will not  
develop.

Please advise the appropriate officials or fire crews in the  
field of this Fire Weather Watch.
